

What Is AgentScope Go?

AgentScope Go is agents, messages, model adapters, tools, state, workspace resources, and event-based execution. It is designed for developers who want to build AI agent systems in Go while keeping the runtime explicit, testable, and easy to integrate with existing Go services.

Requirements

Go 1.26.3 or newer.

GNU Make for the provided development targets.

Python 3.13+, Node.js 22+, and npm 10+ if you want to run all local linting and documentation tools through make setup.

Quick Start

Install the module in your Go project:

```
go get github.com/yuluo-yx/agentscope-go@latest
```

Domain APIs are organized under the pkg/ import root. For example, import github.com/yuluo-yx/agentscope-go/pkg/agent for agents, github.com/yuluo-yx/agentscope-go/pkg/message for messages, and github.com/yuluo-yx/agentscope-go/pkg/model/dashscope for the DashScope model adapter. The module root github.com/yuluo-yx/agentscope-go keeps a small facade package with aliases for common core APIs.

Run a local example without a model API key:

```
go run ./example/message
```

Run a live DashScope chat example:

```
export AI_DASHSCOPE_API_KEY=""
```

```
go run ./example/model/dashscope
```

Minimal ChatModel usage:

```
package main
```

```
import (  
    "context"  
    "fmt"  
    "os"
```

```
"github.com/yuluo-yx/agentscope-go/pkg/message"  
asmodel "github.com/yuluo-yx/agentscope-go/pkg/model"  
"github.com/yuluo-yx/agentscope-go/pkg/model/dashscope"
```

```
)  
  
func main() {  
    chat, err := dashscope.NewChatModel(  
        dashscope.NewCredential(os.Getenv("AI_DASHSCOPE_API_KEY")),  
        "qwen-plus",  
    )  
    if err != nil {  
        panic(err)  
    }  
}
```

```
user, err := message.NewUserMessage("user", "Say hello in one short sentence.")
if err != nil {
    panic(err)
}

response, err := chat.Call(context.Background(), asmodel.CallRequest{
    Messages: []*message.Message{user},
})
if err != nil {
    panic(err)
}

fmt.Println(response.Content)
```

```
}
```
